Dr Tawil has well published in several journals, textbooks and magazines on implantology and digital dentistry. Dr Tawil has held main podium sessions and hands-on workshops worldwide and enjoys a private practice in Brooklyn, New York

ABSTRACT

This program will explore advanced strategies for improving efficiency, predictability, and communication within the implant prosthetic workflow.

Emphasis will be placed on coordination between surgical and restorative phases, case planning considerations, and techniques that support long-term clinical success.

The session will be structured as an interactive, discussion-based program rather than a traditional lecture. While key concepts will be introduced through a focused presentation, the emphasis will be on open dialogue, shared clinical experiences, and practical insights from participating clinicians.

Participants are encouraged to engage, ask questions, and contribute their own approaches, creating a collaborative environment centered on real-world application, improved outcomes, and continuous refinement of clinical workflows.

EDUCATIONAL OBJECTIVES

At the conclusion of this course, participants should be able to:

- Identify key stages in the implant prosthetic workflow that impact treatment success.
- Apply strategies to improve communication between surgical and restorative teams.
- Evaluate common challenges in implant cases and implement solutions to improve outcomes.
- Integrate workflow optimizations into daily clinical practice.
