STEFANO LOMBARDO

DENTAL TRAINING

DAY 1

Case study: preview and design of the prosthetic case.

Dental preparations: comparison and indications for horizontal and vertical preparations.

Temporary restorations: design, relining and finishing of provisionals.

How to achieve esthetics on vertical preparations (BOPT approach).

Traditional and digital impression techniques: indications and limitations of Intra Oral Scanners.

Soft tissue management around teeth and implants.

DAY 2

Intermaxillary relationship recording: from habitual occlusion to Deprogrammed Passively Retruded Position.

Static and dynamic facebows and digital mandibular trackers.

Choosing restorative materials: from metal-ceramic to metal-free.

Implant-Prosthetics Rehabilitations.

Prosthetically guided implantology.

Emergence profiles and implant connections.

Analog, hybrid or full digital strategies.

Prosthetic rehabilitation between analogical foundations and digital innovations: step-by-step clinical cases.

DAY 3

HANDS-ON:

Preparation of teeth on simulator and phantom head: vertical feather edge and horizontal chamfer

Provisionals relining and finishing

Digital and analog face bow, inter maxillary record.

Deprogramming jig and Intra Oral Scan.

All materials and instruments for the hands-on practice are provided by Dental Training.

A travel agency is also available to assist you with your travel arrangements.
